

**Wind Measurements  
Meteorological Systems**

**Sensors and Systems from the Experts**

GWU-Umwelttechnik has been supplying sensors and systems for wind, wind profile, and meteorology since 1986. Scientists and engineers offer a broad knowledge base that ensures their customers to get an optimum solution for almost all measurement tasks, including sensors, system integration, data storage and processing, as well as remote system access through internet or modem. GWU delivers systems and supplies services such as field measurement campaigns and data processing.

The WindExpert.Net group realizes turn-key systems and solutions for wind energy projects and other meteorological applications. Your task is our challenge!

We look forward to receiving your enquiry.

wind

Sensors and Systems  
that measure  
Wind  
Wind Profile  
Meteorology

## Wind Sensors

cup & propeller anemometers, wind vanes

ultrasonic anemometers

## Meteorological Sensors and Systems

weather stations for all atmospheric parameters

visibility for beacon control

## SoDAR Systems

to measure wind, wind profile, turbulence

without mast
